

Speech & Language Therapy Services

The development of communication skills begins in infancy, before the emergence of the first word. Any speech or language problem observed in a child is likely to have a significant effect on his or her social skills, academic skills, and behavior. The earlier a child's speech and language problems are identified and treated, the less likely it is that problems will persist or get worse. Early speech and language intervention can help children be more successful with reading, writing, schoolwork, and interpersonal relationships.

Pediatric Potentials offers comprehensive Speech and Language therapy services for children of all ages, in our office, in homes, and in select schools throughout the greater Orlando area. Our therapists excel in the ability to correctly evaluate a child, provide comprehensive treatment options and teach the family how to help their child succeed to their fullest potential. This is done in a non-threatening and play-based treatment atmosphere. Our services are provided in an environment conducive to play, movement and sensory experiences, all of which are supportive to a child's optimal learning and growth.

We Provide

- ★ Speech & Language Evaluations
- ★ 15-Minute Screenings (at schools & in our office)
- ★ Parent/Teacher Consultations and Trainings
- ★ Classroom or Home Observations and Recommendations
